

Virtual Business Continuity

Benefits Overview:

- Data is protected as it is created
- Files can be rolled-back to any point in time
- Point and click failover from anywhere at any time
- Supports all major applications, operating systems, and database
- Applications can fail-over in either direction
- Does not require recovery before data is accessible
- Software upgrades can be tested "in-the-cloud"
- Tape management is eliminated
- Backup windows are eliminated
- No capital investment required
- Systems can be migrated during normal business hours
- Near zero impact to production servers
- Minimal impact to LAN & WAN

Traditional Business Continuity solutions require a secondary datacenter running identical hardware, software, operating systems, and file structures. This forces businesses to make a significant capital investment, restricting most companies to conventional back-up solutions.

Additionally, there are numerous other costs to consider such as load balancers, security gateways, storage area networks, as well as on-going bandwidth and maintenance expenses. With the advent of virtual technologies and cloud computing, capital costs are completely eliminated, allowing companies of all sizes to afford a fully redundant fail-over environment.

Contact us today for a live failover demo!

Servers Starting @ \$495/month*
 (Microsoft/Linux/Oracle/SQL/Office/Sharepoint
 All Off-the-shelf Applications Supported and more!)

*Each server replicated in the cloud comes with 100gb. Additional Storage Available. Discounts applicable for multiple servers.
